MARGARET ILGENFRITZ - ORCHIDS

Monroe, Michigan, December 30, 1953

Dear Customer:

Here are a few unusual orchid species and some Phalaenopsis hybrids to bloom soon. Most are in spike as you will note:

Odontoglossum chiriquensis: Lovely yellow bloom with brown markings. Blooms about 3" in diameter. Nice plants in 4" and 5" pots, to bloom this spring. \$7.50

Odontoglossum pulchellum in spike: Scapes are about 12" long and produce very pretty, pure-white, fragrant blooms. Disc of the lip is yellow. Mostly in 4" and 5" pots. 7.50

Oncidium leucochilum in spike: Very long scapes produce many flowers of yellowish-green barred and blotched with dark-brown. Mostly in 4" and 5" pots. Order these immediately because the scapes are getting long. 7.50

Epidendrum atropurpureum in sheath: Five or more flowers on a spike. Sepals and petals are green and chocolate-brown. Lip is white with a crimson blotch. To bloom this spring. 7.50

Pure-white Phalaenopsis seedlings in spike for the first time. Three different identified crosses, mostly in 2½" and 3" pots with spikes. 6.50

Pink Phalaenopsis: Two different hybrids - Gloria and Pink Pamela. Mostly in 4" pots, in spike. 7.50

All prices are f.o.b. Monroe. Express shipment recommended.

Cordially yours,

Margaret Ilgenfritz - Orchids.
